

E-Commerce Testing Project – Test Summary Report

Application Tested: SauceDemo / OpenCart (Demo Site)

Prepared By: QA Engineer (Jebin)

Test Period: Nil

Test Type: Manual Testing + Selenium Automation Testing

1. Introduction

This Test Summary Report provides an overview of the testing activities carried out for the E-Commerce demo application. The goal of the testing effort was to validate core functionalities including login, product browsing, cart operations, and checkout. Both manual test cases and Selenium automation scripts were executed.

2. Scope of Testing

In Scope:

- User authentication
- Product listing and product details
- Search functionality
- Add / Remove items from cart
- Checkout workflow
- UI responsiveness (Desktop + Mobile view)
- Negative scenarios (invalid login, invalid payment, session timeout)
- Selenium automation of core flows (Login, Add to cart, Remove, Checkout)

Out of Scope:

- Performance testing
- Security penetration testing
- Load testing
- Integration with real payment gateways

3. Test Artifacts Prepared

- Test Plan
- 42 Test Cases (Functional + UI + Negative)
- Bug Report (10–20 defects expected)

- Requirements Traceability Matrix
- Test Summary Report (this document)
- Selenium Automation Framework (Java + TestNG + Selenium)
- Extent Reports (HTML)

4. Test Environment

Environment Details:

- **URL:** Demo environment – SauceDemo / OpenCart
- **Browsers Tested:** Chrome 128+, Edge 125+ (desktop & mobile view)
- **OS:** Windows 10 / Android mobile responsive tools
- **Automation Tools:** Selenium WebDriver, TestNG, WebDriverManager
- **Reporting Tools:** Extent Reports, Screenshots on Failure

5. Test Execution Summary

Category	Total	Passed	Failed	Blocked
Functional Test Cases	22			
UI Test Cases	10			
Negative Test Cases	10			
Total	42			

(Fill the Pass/Fail/Blocked fields after execution.)

6. Defect Summary

ID	Title	Severity	Status
BUG-001	Incorrect error message for invalid login	Medium	Open / Closed
BUG-002	Image not loading on product page	Low	Open / Closed
BUG-003	Cart count not updating after removing item	High	Open / Closed
BUG-004	Checkout form allows blank address	High	Open / Closed
BUG-005	Sorting price high → low not accurate	Medium	Open / Closed
...	...	...	...

You can add total of 10–20 defects based on your execution.

7. Requirement Traceability Overview

A Traceability Matrix was prepared mapping:

- Requirements → Test Cases → Test Results

All high-priority user flows were covered with corresponding test cases.

8. Automation Summary

Automated Test Flows:

- Login
- Product search
- Add to cart
- Remove item
- Checkout flow
- Screenshot on failure
- Extent Reports

Automation Status:

- Total automated tests: (fill count)
- Execution mode: Local machine
- Automation Pass %: (fill after execution)

9. Risks & Mitigations

Risk	Impact	Mitigation
Demo site instability	Medium	Re-run failed tests, use waits, retry logic
No real payment gateway	Low	Validate flow with dummy payments
Network dependency	Medium	Test offline behavior; add error handling

10. Overall Quality Assessment

Based on the executed test cases and automation runs:

- Core user journeys are **stable**.
- UI is **mostly responsive** but needs improvements in mobile layout.
- A few functional issues remain (cart, validation messages).
- Automation suite covers the main regression flows effectively.

Quality Rating: GOOD / NEEDS IMPROVEMENT / CRITICAL

(Choose after actual execution)

11. Conclusion

Testing is **completed successfully** with major user flows validated. Identified defects have been logged and should be resolved before production-level rollout. The automation suite is ready for integration into CI/CD for continuous regression testing.
